

# Heavyweight coaches

## Heavyweight Coach Kit Update

This kit follows the pattern of my previous reskinning kits. As before each model is made up of two shape files. The main part which includes the wheels, couplers underframe and roof and the coach body controlled by the FreightAnim entry in the wag file.

The shapes include :-

### Basic shape

xx-hw-coach.s

xx-hw-observation-ac.s

**xx-hw-observation-nac.s** ( new Shape)

### Body shape

xx-hw-coach-body.s

xx-hw-combine-body.s

xx-hw-baggage-body.s

xx-hw-diner-body.s

**xx-hw-sleeper-body.s**

( new Shape)

xx-hw-observation-body.s

(air conditioning)

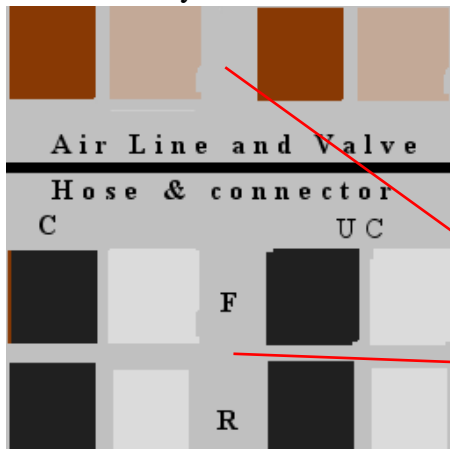

xx-hw-observation-body.s

(no air conditioning)

As this is an “upgrade” I have included other features and minor alterations. The coaches now have maskable air lines in either connected or unconnected position, front or back. By default the observation car has the rear line uncoupled and the baggage car has the front line uncoupled. The other cars have both lines in the coupled position. These settings can be altered by editing the alpha channel of the relevant x-xx-alm.ace file My future locomotives we will have this feature also.

As with my other kits this set is offered to you as it is for you to have fun with. Repaints can be uploaded to Train-sim or Avsim without my permission but please ask for any other site. The models are not to be used for any commercial purpose without my consent.
